EXECUTIVE SUMMARY
Wildlife must be able to move through our landscapes to acquire resources, find genetically diverse mates, and adapt to a changing climate. Roads, development, and other infrastructure can impede wildlife movement and create dangerous scenarios on our roadways for both wildlife and people. Virginia continues to build a network of connected landscapes and reduce human-wildlife conflict with the recent release of its Wildlife Corridor Action Plan (WCAP).

At wildlife crossings, we are considering solutions that can improve habitat connectivity, motorist safety, and the flood-resilience of infrastructure. Roads, development, and other infrastructure can impede wildlife movement and create dangerous scenarios on our roadways for both wildlife and people. Virginia continues to build a network of connected landscapes and reduce human-wildlife conflict with the recent release of its Wildlife Corridor Action Plan (WCAP).
